

osCommerce manual installation

Unfortunately the osCommerce plugin can't be installed completely via the back end of your webshop. Instead, you will need to use an FTP tool to upload the files manually.

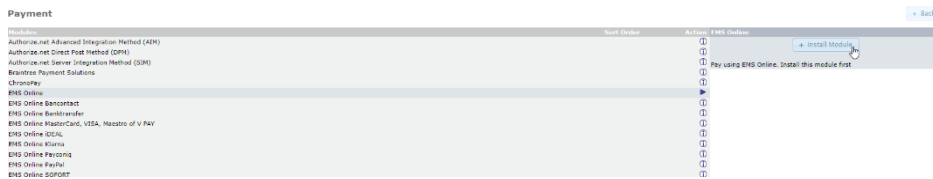

1. Go to your osCommerce installation with an FTP tool.
2. Upload the files from the ZIP file to the root directory of your osCommerce installation.
3. Go to the back end of your webshop.
4. In the menu, click 'Modules' and then 'Payment'.

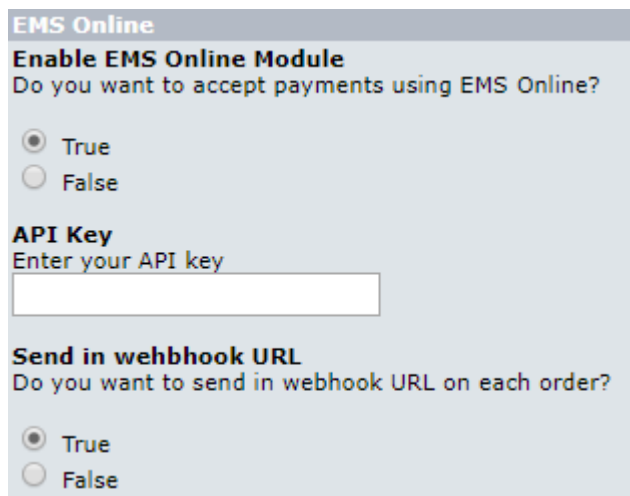

5. Click on 'Install Module' in the top right corner.

6. Look for the 'EMS Online' module, select it and then click 'Install Module' to the right.

7. osCommerce will install the module. Click on 'EMS Online' and the following window will pop up.

8. At 'Enable EMS Online Module' select 'True'. Fill in the API key you received in the field 'API Key'. Click 'Save' at the bottom of the pop up.
9. Repeat steps 5 till 7 for every payment method you'd like to activate for your webshop. You don't have to fill in the API key for the individual payment method modules.
10. You're done, the active payment methods should be visible in the checkout of your webshop.
